- Team leaders and Supervisors
- Line / Functional Managers
- Senior Managers
- Directors

## The Benefits of Project Management

Over the past decade more and more organizations have recognized the importance of the project management approach to meeting organizational goals, increasing productivity and optimizing resource utilization.

The practice of project management is now widely accepted in business, industry, and all levels of local, regional and central government.(Globally)

Supervisors, middle managers and executives in both public and private organizations are now, more than ever, actively engaged in project, program and portfolio management.

The need for training in project management is growing every day. In the private and Government sector, organisations are now starting to accept the fact that they have ignored an important factor of business and that is to deliver their projects; on time, within budget and meeting set quality requirements. In essence these organisations have failed to manage projects, mostly due to a lack of project management knowledge, skills and training.

### 1. Benefits of Project Management for Business

Disciplined Project Management Provides:

- Focal point for effective communications, coordination and control
